Optimumcut-1D Professional Crack+ Keygen [Mac/Win]

Optimumcut-1D is a New Cutting Listing Software that combines extensive Manufacturing experience with the latest Technology, creating a Software product that stands out from the competition. Optimumcut-1D gives you a complete cutting list solution for different industries such as: Construction, Engineering, Woodworking, Home Improvement, Lumber, Manufacturing, Shopfronts and Curtain Walling. Optimumcut-1D, based on Modern Thinking, technology, developed by Master Practitioners in the manufacturing sector over the last 15 years, applying Innovative and Innovative techniques in Producing Superior Engineering Software. With Optimumcut-1D you can: 1. Generate optimal cost cutting lists for any industry, which are very cost effective. 2. Obtain an optimal use of your materials, by calculating and printing Cutting Lists for different parts and/or assemblies. 3. Identify potential waste and scrap, and how to reduce it, saving your company money, time and resources. 4. Obtain an optimum cost cutting list by nesting (nesting a stock length in another length to lower the cost of material per length) for any stock size or material per length to obtain the best materials yield from a minimum amount of stock. 5. Calculate and display an optimum cost cutting list, without writing it down, printing it or saving it in a Word document. 6. Manage all your stock, material, prices and costs, with all your stock being organized by the Vendor. 7. Easily see and compare all stock data (material, vendor, date, name, quantity, price, comments, discounts, total cost, profit, percentage mark up) with all stock in one database. 8. Obtain stock data from multiple vendors. 9. Utilize the multiple functions of Optimumcut-1D to obtain a complete cutting list solution, displaying the best cost cutting list, using the minimum material and maximising profit. 10. You can generate cost cutting lists using different standard lengths. You can use different standard lengths to estimate or bid your stock, to display optimum cost cutting lists to you customers, or to print cutting lists. You can use different standard lengths to specify material quantities in your specifications, or to specify material quantities in your manufacturing plan. You can even specify material quantities for your Purchasing Plan. 11. Obtain the most profitable usage of your stock, by calculating and printing cutting lists for different parts and/or assemblies. 12. Calculate

Optimumcut-1D is a Multi-Parameter Optimization software that can be used for estimation and evaluation of stock materials. Optimumcut-1D is a very useful, full functional and practical stock material usage optimization software. It supports all the industry standard lengths available with many types of stock materials with their corresponding usage costs. OPTIMUMCUT-1D supports: 1. The majority of stock materials available in the Construction Industry. 2. Very large number of standard stock lengths and the usage costs of each standard length for all stock materials used in the industry. 3. The majority of stock lengths and the usage costs of each standard length for all stock materials used in the engineering industry. 4. The majority of stock lengths and the usage costs of each standard length for all stock materials used in the woodworking industry. 5. The majority of stock lengths and the usage costs of each standard length for all stock materials used in the Lumber Industry. 6. The majority of stock lengths and the usage costs of each standard length for all stock materials used in the home improvement industry. 7. Over 150 standard stock lengths for most of the stock materials used in the furniture industry. 8. Supports a large number of each stock material. 9. Supports a very large number of most of the standard lengths for most of the stock materials. 10. Handles cutting lists of extremely large size. 11. Allows cutting lists to be prepared on a portable handy.This invention relates to a new and improved method and apparatus for sealing a tube of thermoplastic material with molten plastic as a byproduct of the extruding process. At present, thermoplastic materials such as polypropylene, polyethylene, vinyl, etc. are extruded to form tubing. The tubing is subsequently heat sealed to form a continuous, rolled product. The heat sealing process usually entails heating the tubing along a portion of the length of the tubing to a welding temperature of about 300.degree.-450.degree. F., and then pressing the tubing to be heat sealed into the heated area to be welded. The press can be an external press or the tubing can be compressed internally as by a heated sleeve. The heating required for welding is an energy-intensive process which generates the byproduct of polymeric material that is extruded. The present invention provides a new and improved method and apparatus for forming the heat sealed product from a thermoplastic extrudate in which a portion of the by 2edc1e01e8

Optimumcut-1D is a cutting list application that generates, calculates and displays exactly how to obtain the best yield from stock lengths of profile. Using this stock length nesting, Optimumcut-1D can calculate and display the best yields for a given length of material from different standard lengths of material, to optimize the use of material. In this way, an optimum material list can be obtained for any given stock length, for any given length of material. With this optimum material list, the best material yield is displayed with the best material usage. This allows an optimum material usage to be displayed for any length of material, at any material level. For any material level, you will have the best material usage and the highest material yield using the minimum amount of material. If you are interested in learning more about Optimumcut-1D, please visit our website at: www.optimumcut-1d.com Optimumcut-1D software is not just a stock material nesting application. It is a cutting list application that produces a materials optimization spreadsheet, which can be presented to your customers, or to a sales manager, for example, so they can apply this information to the ordering and manufacturing of products in the course of the sales process. It produces a material optimization spreadsheet which enables the sales manager to display the material required for a particular product and the maximum amount of material to be achieved from the minimum stock length of material used. Optimumcut-1D will generate a materials optimization spreadsheet for any Stock Length of Material required and produce an optimum material list, which may be presented to your customer or to a sales manager, for example. You may also wish to present your customer with an optimum material usage and a material usage table. This optimum material usage and table can be calculated and displayed by the application, or any other spreadsheet application, so you can provide your customer or sales manager with accurate information about the optimum amount of material to be ordered for a specific stock length of material to be used in the manufacture of a product. This allows your customers to make an optimum decision about how to buy the stock of material required to be ordered and manufactured, prior to the order being placed. This allows you to show your customers, or your sales manager, how to produce the maximum amount of material from the minimum amount of stock. Therefore, if you or your customer is having difficulty with material usage and a material usage table, then it may be possible to apply this information to the ordering and manufacturing of products in the

Optimumcut-1D is a cutting list application which generates and calculates optimum material yields from stock lengths of profile and creates and displays a Cutting List for an optimum yield based on the stock lengths chosen. Optimumcut-1D makes the tedious task of calculating optimum yield, easy and less time consuming. Optimum cut-1D is the cutting list application which makes the task of calculating the optimum yield easy and efficient. Optimum cut-1D is the Cutting list application which makes the task of calculating the optimum yield easy and efficient. Optimum cut-1D, when you know how to use it, it can save you time and money. Optimum cut-1D can be used to create Optimized Cutting Lists from stock lengths of materials used in the fabrication of products from many industries such as: Construction Industry: Curtain Walling, Shopfronts, Windows, Doors, Brise Soleil, Louvres, Trickle Ventilators, Structural Steelwork, Pressings, Cladding, Roofing, Fencing, Balustrading etc. Engineering Industry: Screw Manufacture, Linear Component Manufacture etc. Woodworking Industry: Cabinet Making, Joinery, Furniture. Lumber Industry: Cutting source materials from trees into stock sizes and stock lengths. Home Improvements : Curtain Rail Manufacture, Shelving, Tables, Wardrobes, Doors, Cabinets, Skirting Boards, Flooring etc. Description: Optimumcut-1D is a cutting list application which generates and calculates optimum material yields from stock lengths of profile and creates and displays a Cutting List for an optimum yield based on the stock lengths chosen.
